Talking to your Doctor about Omnipod DASH

Omnipod DASH is an insulin delivery system designed to help simplify your life and address many of your challenges. It is tubeless, waterproof,* easy and virtually painless to apply.

Deciding on the right diabetes therapy can be a big decision, and you don't have to make it alone. Use this guide to have a discussion with your health care provider to determine if Omnipod might be right for you.

Feel free to print it and bring it to your next appointment or send it to your healthcare provider in advance.

Concerns	Why Omnipod
<input type="checkbox"/> I sometimes forget or skip doses.	Omnipod DASH provides up to 3 days (72 hours) of insulin minimizing missed doses.
<input type="checkbox"/> I sometimes struggle to get my A1C to where my Doctor recommends.	T2 patients using Omnipod DASH saw a reduction in A1C by 2.3% in a retrospective study. ^{1,2}
<input type="checkbox"/> Taking insulin injections multiple times per day gets in the way of my lifestyle.	Omnipod DASH replaces multiple daily injections (MDI – long acting, mealtime and corrections). One Pod replaces 14 injections. [†]
<input type="checkbox"/> I don't like giving myself injections in public.	You don't have to. The Pod is small and discrete, and the Personal Diabetes Manager (PDM) offers the flexibility to manage your insulin treatment in the palm of your hand.
<input type="checkbox"/> Carb counting and logging meals is time consuming.	No more meal time logging. Omnipod DASH has a preset bolus feature and an integrated bolus calculator and the CalorieKing® library of 80,000+ foods.
<input type="checkbox"/> I don't think I can afford a pump.	On average people pay less than \$50 per month, [‡] and those on medicare even less. Plus, no longer need long-acting Insulin while on Omnipod DASH.
<input type="checkbox"/> I am not confident that I will be able to learn how to operate it—will someone help me?	Omnipod is designed to be simple to operate. Once you fill your prescription and have your new Omnipod DASH you will be connected to a Certified Pump Trainer and Omnipod Specialist to help get you started.
<input type="checkbox"/> Is Omnipod DASH approved for people with T2 diabetes?	Omnipod DASH is approved for people with Insulin-requiring type 2 diabetes—and because it is through the pharmacy no c-peptide test required.

Still have questions?

Our Omnipod Specialists are here to help. Call them today at **1-800-591-9948**.

1. In HbA1c subgroup analysis, baseline vs. 3-month follow up HbA1c values were: <7%: 6.4% vs 6.6%; 7 to <8%: 7.5% vs. 7.2%; 8 to <9%: 8.4% vs. 7.7%; ≥9%: 10.8% vs. 8.5%, respectively.

2. Carlson, AL et al. Improved Glycemic Control in 3,592 Adults with Type 2 Diabetes Mellitus Initiating a Tubeless Insulin Management System. Diabetes Res Clin Pr; 2021;174:108745: <https://doi.org/10.1016/j.diabres.2021.108735> 3,592 patients with Type 2 diabetes aged ≥18 years were included in a multisite, retrospective study based in the US. The study evaluated glycemic control and insulin use after three months of Omnipod System and Omnipod DASH System use, compared to prior treatment with MDI (74%), tubed insulin pumps (15%), and unknown (11%). HbA1c and TDD outcomes were from medical records or self-reported if medical records not available.

* The Pod has an IP28 rating for up to 25 feet for 60 minutes. The Personal Diabetes Manager (PDM) is not waterproof.

† 14 injections/3 days based on individuals on MDI taking ≥ 3 bolus and 1-2 basal injections/day multiplied by 3 days. Chiang et al. Diabetes Care. 2014;37:2034-2054

‡ Calculated based on a consumption of ten (10) Pods per month. Majority defined as at least 70% of patient co-pays under \$50 per month. 131,049 paid claims between January 1st, 2020 and December 31st, 2020, both for commercial plans and Medicare, were analyzed. Actual co-pay amount depends on patient's health plan and coverage, they may fluctuate and be higher or lower than the advertised amount on a monthly basis. Source: Data on file.
